Setup Conda Environment on UFAL cluster

- log into ufal account
- `cluster`
- `qrsh`
- `bash /net/mtm/mtm002/mmt/install/Anaconda2-4.1.1-Linux-x86_64.sh`
- `export PATH=${HOME}/anaconda2/bin:${PATH}`
- `conda conda create -name mmt -c https://conda.anaconda.org/cidermole cmake boost zlib gperftools python=2.7 requests jdk8 apache-maven patchelf`
- `source activate mmt`
- `conda install gcc -f`

Clone and Compile MMT

- `git clone http://github.com/ugermann/MMT -b tutorial-at-mt-marathon-2016`
- `cd MMT`
- `./util/full-recompile.sh`
