Introduction

This is the third time WMT has been held as a conference. The first time WMT was held as a conference was at ACL 2016 in Berlin, Germany, and the second time was at EMNLP 2017 in Copenhagen, Denmark. Prior to being a conference, WMT was held 10 times as a workshop. WMT was held for the first time at HLT-NAACL 2006 in New York City, USA. In the following years the Workshop on Statistical Machine Translation was held at ACL 2007 in Prague, Czech Republic, ACL 2008, Columbus, Ohio, USA, EACL 2009 in Athens, Greece, ACL 2010 in Uppsala, Sweden, EMNLP 2011 in Edinburgh, Scotland, NAACL 2012 in Montreal, Canada, ACL 2013 in Sofia, Bulgaria, ACL 2014 in Baltimore, USA, and EMNLP 2015 in Lisbon, Portugal.

The focus of our conference is to bring together researchers from the area of machine translation and invite selected research papers to be presented at the conference.

Prior to the conference, in addition to soliciting relevant papers for review and possible presentation, we conducted 8 shared tasks. This consisted of three translation tasks: Machine Translation of News, Biomedical Translation, and Multimodal Machine Translation, two evaluation tasks: Metrics and Quality Estimation, as well as the Automatic Post-Editing and Parallel Corpus Filtering tasks. The Parallel Corpus Filtering tasks was run at this year’s edition of WMT for the first time. As almost all machine translation system require parallel corpora to train their models, the size and quality of available parallel corpora has a substantial impact on machine translation quality. At the same, sizable, high-quality parallel corpora are not available for many languages. This task addresses the important issue of how to exploit noisy parallel corpora, which are available in much larger quantities and for a larger number of languages.

The results of all shared tasks were announced at the conference, and these proceedings also include overview papers for the shared tasks, summarizing the results, as well as providing information about the data used and any procedures that were followed in conducting or scoring the tasks. In addition, there are short papers from each participating team that describe their underlying system in greater detail.

Like in previous years, we have received a far larger number of submissions than we could accept for presentation. WMT 2018 has received 84 full research paper submissions (not counting withdrawn submissions). This is a record number of research paper submissions and more than double the number of submissions of earlier editions of WMT. In total, WMT 2018 featured 27 full research paper presentations (32% acceptance rate) and 82 shared task poster presentations.

We would like to thank the members of the Program Committee for their timely reviews. We also would like to thank the participants of the shared task and all the other volunteers who helped with the evaluations.
